

A second set of eyes on your IT and building security

Independent assessments, a clear fix list for your current IT provider, and verification that it got done.

Like your financial audit, for IT

Your books get an outside audit, and nobody takes it to mean the accountant is bad. We do the same for IT and physical security. Leadership gets a plain-English report. Your IT person or provider gets a step-by-step fix list. We aren't here to replace anyone.

Cybersecurity

- Network, firewall and Wi-Fi
- Accounts, passwords and MFA
- Email and Microsoft 365
- Patching and antivirus
- Backups and recovery
- Written policies and staff training

Physical security

- Doors, locks and access control
- Camera coverage and recording
- Intrusion and fire alarms
- Server room and network closet
- Visitors and sensitive areas
- Old drives and copier disposal

How it works

STEP 1

Assess

On-site review, findings by severity

STEP 2

Walk through

Your IT sees findings first and responds

STEP 3

Fix

Deadlines by severity, up to 90 days

STEP 4

Re-test

We confirm each item is fixed

STEP 5

Stay current

Quarterly reviews, yearly re-check

You receive: executive summary · technical fix guide · security scorecard · re-test report · signed record of any accepted risks

Our promise

Our job is findings and verification, and you always decide who does the fixing. If you ever hire STP to run your IT, an independent firm takes over your assessments, so our work gets checked too.
